

## Representative Projects

### Project Name

**Mesa Del Sol—Phase I & II**

### Client

**Randy Hall**

### Contact

**Randy Hall**

### Key Elements

**Land Survey**

**Water Main Design**

**Sanitary Sewer Design**

**Street Design**

**Storm Sewer Design**

**Drainage Design**

**Construction Administration**

**Project Survey Layout**

**Curb Walk**

## Civil Engineering Services

ECS prepared design plans for one half of this 11 acre subdivision in Casper Wyoming. This project included new water, sewer, storm sewer, streets and curb walk for approximately 30 homes in the Mesa area. Some of the new sewer line is to be installed in the existing streets and they will be resurfaced. This project has been ongoing and will also add new homes to an area that is up and coming. This project included street design on unstable clay soils in which ECS worked with the contractor and the owner to come up with a solution that was agreeable and feasible for all.

ECS worked closely with the City of Casper public services department to ensure that all the construction would be performed according to building requirements and included them every step of the process.
